Wedding QR Code Sign Templates

Five original layouts. Add your own event QR code before printing.

How to add your QR code

- [ ] Create your QR code in the tool you use to collect photos (for Evershots, the join QR in your event).
- [ ] Download it as a PNG, dark on a light background.
- [ ] Print one proof of the template and place your QR code inside the dashed square.
- [ ] Scan it with an iPhone and an Android phone from arm's length.
- [ ] Size: at least 3 in (7.5 cm) on a sign, 1.5 in (4 cm) on a table card.
- [ ] These templates include no working QR code on purpose.

Optional: collect the photos with Evershots. Guests scan a QR code and shoot, with no app to download and no account.

FORMAL LAYOUT

Share the evening with us

Place your QR code here

Scan the code to add your photographs to our wedding album.
